Education

Technological Institute of the Philippines Quezon City
BS in Information Technology, Major in Cybersecurity. Jun 2026

- Graduated Cum Laude with a General Weighted Average (GWA) of 1.36.
- Relevant coursework: Data Structures and Algorithms, Object-Oriented Programming, and Network Security.

Experience

NexVision Innovations, Inc. Marikina City
Full-Stack Developer Intern & Project Lead Jan 2026 – Apr 2026

- Applied SOLID principles and software design patterns to ensure high code maintainability and readability within a production environment.
- Investigated and troubleshot complex system-related issues, documenting findings in Jira to maintain system stability and performance.
- Conducted rigorous code reviews and established centralized technical documentation to streamline knowledge transfer and onboarding.
- Facilitated Agile Scrum development cycles, coordinating tasks among a team of
- developers to meet strict project deadlines.
- Supported database operations by writing and executing optimized SQL queries for data reconciliation and relational integrity.

Projects

Snake Game Aug 2023 – Nov 2023

- Engineered a classic arcade game using custom linked list data structures to manage dynamic memory and sequential movements.
- Implemented complex collision-detection algorithms for head-to-tail validation and obstacle avoidance, demonstrating strong logic and debugging skills.

BazaarX Jan 2026 – Apr 2026

- Built with React, TypeScript, and Supabase; integrated secure OAuth pipelines and robust multi-role state management using Zustand.
- Optimized backend workflows including SQL constraints and data validation logic to ensure relational integrity and prevent duplicate records.

PocketHive: AI-Powered Receipt Processing Automation Jan 2025 – May 2025

- Automated document workflows by integrating OCR technologies to extract unstructured text from raw physical receipts, processed using OpenAI APIs to dynamically parse messy text streams and auto-fill structured database schemas, eliminating manual input overhead.

EchoWear: Smart Glove Translation Aug 2024 – Dec 2024

- Developed a wearable system using Arduino Nano ESP32 and flex sensors, capturing real-time hardware data for low-latency translation.
- Engineered a Python-based pipeline using TensorFlow Lite to process sensor inputs through a custom LSTM machine learning model.

Technical Skills

Programming & Scripting: Python, Java, C++, JavaScript, TypeScript, PHP, Dart, Bash, R
Core CS & Design: Data Structures and Algorithms (DSA), Object-Oriented Programming (OOP), SOLID Principles, Software Design Patterns, TDD Concepts
Networking & Security: TCP/IP, OSI Model, Basic Networking Concepts, Wireshark, Burp Suite
Databases & Tools: SQL, MySQL, PostgreSQL, Supabase, Git, GitHub, Jira, Agile/Scrum, technical documentation
AI & Hardware: TensorFlow Lite, OpenAI API, Arduino, ESP32, Flex Sensors, n8n Automation
